Heaventools Software's PE Explorer Wins 2010 Epsilon Award for Software Excellence

Vienna, Austria - November, 2010 - Heaventools Software's PE Explorer was named the winner of the 2010 Epsilon Award at the tenth annual European Software Conference. Every year, the Epsilon Award recognizes the best software program from the European software and microISV community. Applications are nominated by software developers, a peer-review process that ensures that only the highest quality software is considered for the award.

PE Explorer is a software development tool that lets programmers view, edit, and reverse engineer EXE and DLL files. In addition to inspecting the internal processing of your own software, PE Explorer lets you look inside third-party Windows applications and libraries.

PE Explorer makes it simple to open, view, and edit EXE, DLL, and ActiveX controls, as well as SCR, CPL, SYS, MSSTYLES, BPL, DPL, and other executable files, including files that run on the MS Windows Mobile platform.

Simply select a file to examine, and PE Explorer analyzes the file and displays a summary of the PE header information, as well as all of the resources that the file contains. In addition to being a powerful resource editor, PE Explorer includes an API function syntax lookup, a dependency scanner, a section editor, a UPX unpacker, and a built-in disassembler.

Whether you're an applications developer who needs a tool to look inside of your binaries and determine how they're working, a maintenance programmer who needs to reverse engineer a third-party library for which you don't have the source code, or a forensics expert who needs to look inside an unknown binary file and understand its properties, PE Explorer has the tools that you need.

For more information, contact Heaventools Software, Pacific Business Centre, 101-1001 West Broadway Dept. 381, Vancouver, BC V6H 4E4 Canada. Internet: <http://www.heaventools.com/>.

###

About Heaventools Software:

Since 2000, Heaventools Software has been developing and marketing software developers' tools, with specialization in the portable executable (PE) file format.

In addition to PE Explorer, the company also offers Resource Tuner, a PE Explorer spin-off application that makes it simple to view, edit, and replace resources in strings, bitmaps, logos, and icons in 32-bit Windows programs; Resource Tuner Console, a program to instantly change icons and strings in compiled 32- and 64-bit EXE or DLL files from the command line; and FlexHex Hex Editor, an application for browsing and hex editing binary data in OLE compound files, logical devices, physical drives, and binary files. For more information, visit <http://www.heaventools.com/>.

About the European Software Conference and the Epsilon Award:

The eleventh annual European Software Conference will be held in November, 2011 in London, England. Additional information about the Epsilon Award, and about the European Software Conference, can be found on <http://www.euroconference.org/> or <http://www.microisv.eu>.

David Boventer, the European Software Conference's Executive Director, is available for telephone interviews. Please contact him by phone on +49 170 9742506. Mr. Boventer is located in Germany, and speaks fluent German and English.
